Week-4: Code-along

Nicole Lim

2023-11-23

II. Code to edit and execute using the Code-along.Rmd file

A. Data Wrangling

1. Loading packages (Slide #16)

```
# Load package tidyverse
library(tidyverse)
```

2. Loading data-set (Slide #16)

```
# Read data from the hotels.csv file and assign it to a variable named, "hotels"
hotels <- read_csv("hotels.csv")
```

```
## Rows: 119390 Columns: 32
## ── Column specification ────────────────────────────────────────────────────────
## Delimiter: ","
## chr  (13): hotel, arrival_date_month, meal, country, market_segment, distrib...
## dbl  (18): is_canceled, lead_time, arrival_date_year, arrival_date_week_numb...
## date  (1): reservation_status_date
##
## ℹ Use `spec()` to retrieve the full column specification for this data.
## ℹ Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

3. List names of the variables in the data-set (Slide #19)

```
# Enter code here
names(hotels)
```

```
##  [1] "hotel"                          "is_canceled"
##  [3] "lead_time"                      "arrival_date_year"
##  [5] "arrival_date_month"             "arrival_date_week_number"
##  [7] "arrival_date_day_of_month"      "stays_in_weekend_nights"
##  [9] "stays_in_week_nights"           "adults"
## [11] "children"                       "babies"
## [13] "meal"                           "country"
## [15] "market_segment"                 "distribution_channel"
## [17] "is_repeated_guest"              "previous_cancellations"
## [19] "previous_bookings_not_canceled" "reserved_room_type"
## [21] "assigned_room_type"             "booking_changes"
## [23] "deposit_type"                   "agent"
## [25] "company"                        "days_in_waiting_list"
## [27] "customer_type"                  "adr"
## [29] "required_car_parking_spaces"    "total_of_special_requests"
## [31] "reservation_status"             "reservation_status_date"
```

4. Glimpse of contents of the data-set (Slide #20)

```
# Enter code here
glimpse(hotels)
```

```
## Rows: 119,390
## Columns: 32
## $ hotel                         <chr> "Resort Hotel", "Resort Hotel", "Resort…
## $ is_canceled                   <dbl> 0, 0, 0, 0, 0, 0, 0, 0, 1, 1, 1, 0, 0, …
## $ lead_time                     <dbl> 342, 737, 7, 13, 14, 14, 0, 9, 85, 75, …

## $ reservation_status_date       <date> 2015-07-01, 2015-07-01, 2015-07-02, 20…
```

B. Choosing rows or columns

5. Select a single column (Slide #24)

```
# Enter code here
select(hotels, hotel)
```

```
## # A tibble: 119,390 × 1
##    hotel
##    <chr>
##  1 Resort Hotel
##  2 Resort Hotel
##  3 Resort Hotel
##  4 Resort Hotel
##  5 Resort Hotel
##  6 Resort Hotel
##  7 Resort Hotel
##  8 Resort Hotel
##  9 Resort Hotel
## 10 Resort Hotel
## # ℹ 119,380 more rows
```

6. Select multiple columns (Slide #25)

```
# Enter code here
select(hotels, customer_type, is_repeated_guest)
```

```
## # A tibble: 119,390 × 2
##    customer_type is_repeated_guest
##    <chr>                     <dbl>
##  1 Transient                     0
##  2 Transient                     0
##  3 Transient                     0
##  4 Transient                     0
##  5 Transient                     0
##  6 Transient                     0
##  7 Transient                     0
##  8 Transient                     0
##  9 Transient                     0
## 10 Transient                     0
## # ℹ 119,380 more rows
```

7. Arrange entries of a column (Slide #28)

```
# Enter code here
arrange(hotels,lead_time)
```

```
## # A tibble: 119,390 × 32
##    hotel        is_canceled lead_time arrival_date_year arrival_date_month
##    <chr>              <dbl>     <dbl>             <dbl> <chr>
##  1 Resort Hotel           0         0              2015 July
##  2 Resort Hotel           0         0              2015 July
##  3 Resort Hotel           0         0              2015 July
##  4 Resort Hotel           0         0              2015 July
##  5 Resort Hotel           0         0              2015 July
##  6 Resort Hotel           0         0              2015 July
##  7 Resort Hotel           0         0              2015 July
##  8 Resort Hotel           0         0              2015 July
##  9 Resort Hotel           0         0              2015 July
## 10 Resort Hotel           0         0              2015 July
## # ℹ 119,380 more rows
## # ℹ 27 more variables: arrival_date_week_number <dbl>,
## #   arrival_date_day_of_month <dbl>, stays_in_weekend_nights <dbl>,
## #   stays_in_week_nights <dbl>, adults <dbl>, children <dbl>, babies <dbl>,
## #   meal <chr>, country <chr>, market_segment <chr>,
## #   distribution_channel <chr>, is_repeated_guest <dbl>,
## #   previous_cancellations <dbl>, previous_bookings_not_canceled <dbl>, …
```

8. Arrange entries of a column in the descending order (Slide #30)

```
# Enter code here
arrange(hotels, desc(lead_time))
```

```
## # A tibble: 119,390 × 32
##    hotel        is_canceled lead_time arrival_date_year arrival_date_month
##    <chr>              <dbl>     <dbl>             <dbl> <chr>
##  1 Resort Hotel           0       737              2015 July
##  2 Resort Hotel           0       709              2016 February
##  3 City Hotel             1       629              2017 March
##  4 City Hotel             1       629              2017 March
##  5 City Hotel             1       629              2017 March
##  6 City Hotel             1       629              2017 March
##  7 City Hotel             1       629              2017 March
##  8 City Hotel             1       629              2017 March
##  9 City Hotel             1       629              2017 March
## 10 City Hotel             1       629              2017 March
## # ℹ 119,380 more rows
## # ℹ 27 more variables: arrival_date_week_number <dbl>,
## #   arrival_date_day_of_month <dbl>, stays_in_weekend_nights <dbl>,
## #   stays_in_week_nights <dbl>, adults <dbl>, children <dbl>, babies <dbl>,
## #   meal <chr>, country <chr>, market_segment <chr>,
## #   distribution_channel <chr>, is_repeated_guest <dbl>,
## #   previous_cancellations <dbl>, previous_bookings_not_canceled <dbl>, …
```

9. Select columns and arrange the entries of a column (Slide

#31)

```
# Enter code here
arrange( select(hotels, total_of_special_requests), desc(total_of_special_requests))
```

```
## # A tibble: 119,390 × 1
##    total_of_special_requests
##                        <dbl>
##  1                         5
##  2                         5
##  3                         5
##  4                         5
##  5                         5
##  6                         5
##  7                         5
##  8                         5
##  9                         5
## 10                         5
## # ℹ 119,380 more rows
```

10. Select columns and arrange the entries of a column using the pipe operator (Slide #37)

```
# Enter code here
hotels %>% select(lead_time) %>% arrange(desc(lead_time))
```

```
## # A tibble: 119,390 × 1
##    lead_time
##        <dbl>
##  1       737
##  2       709
##  3       629
##  4       629
##  5       629
##  6       629
##  7       629
##  8       629
##  9       629
## 10       629
## # ℹ 119,380 more rows
```

11. Pick rows matching a condition (Slide #44)

```
# Enter code here
#hotels %>% select(lead_time) %>% filter(lead_time > 300)
hotels %>% filter(children >=1) %>% select(hotel, children)
```

```
## # A tibble: 8,590 × 2
##    hotel        children
##    <chr>           <dbl>
##  1 Resort Hotel        1
##  2 Resort Hotel        2
##  3 Resort Hotel        2
##  4 Resort Hotel        2
##  5 Resort Hotel        1
##  6 Resort Hotel        1
##  7 Resort Hotel        2
##  8 Resort Hotel        2
##  9 Resort Hotel        1
## 10 Resort Hotel        2
## # ℹ 8,580 more rows
```

12. Pick rows matching multiple conditions (Slide #46)

```
# Enter code here
hotels %>% filter(children >=1, hotel == "City Hotel") %>% select(hotel, children)
```

```
## # A tibble: 5,106 × 2
##    hotel      children
##    <chr>         <dbl>
##  1 City Hotel        1
##  2 City Hotel        2
##  3 City Hotel        1
##  4 City Hotel        1
##  5 City Hotel        1
##  6 City Hotel        1
##  7 City Hotel        1
##  8 City Hotel        1
##  9 City Hotel        1
## 10 City Hotel        1
## # ℹ 5,096 more rows
```

13. Non-conditional selection of rows: sequence of indices (Slide #49)

```
# Enter code here
#Slice for selecting rows by their row numbers
hotels %>% slice(1:5)
```

```
## # A tibble: 5 × 32
##   hotel        is_canceled lead_time arrival_date_year arrival_date_month
##   <chr>              <dbl>     <dbl>             <dbl> <chr>
## 1 Resort Hotel           0       342              2015 July
## 2 Resort Hotel           0       737              2015 July
## 3 Resort Hotel           0         7              2015 July
## 4 Resort Hotel           0        13              2015 July
## 5 Resort Hotel           0        14              2015 July
## # ℹ 27 more variables: arrival_date_week_number <dbl>,
## #   arrival_date_day_of_month <dbl>, stays_in_weekend_nights <dbl>,
## #   stays_in_week_nights <dbl>, adults <dbl>, children <dbl>, babies <dbl>,
## #   meal <chr>, country <chr>, market_segment <chr>,
## #   distribution_channel <chr>, is_repeated_guest <dbl>,
## #   previous_cancellations <dbl>, previous_bookings_not_canceled <dbl>,
## #   reserved_room_type <chr>, assigned_room_type <chr>, …
```

14. Non-conditional selection of rows: non-consecutive/specific indices (Slide #50)

```
# Enter code here
hotels %>% slice(1,2,7)
```

```
## # A tibble: 3 × 32
##   hotel        is_canceled lead_time arrival_date_year arrival_date_month
##   <chr>              <dbl>     <dbl>             <dbl> <chr>
## 1 Resort Hotel           0       342              2015 July
## 2 Resort Hotel           0       737              2015 July
## 3 Resort Hotel           0         0              2015 July
## # ℹ 27 more variables: arrival_date_week_number <dbl>,
## #   arrival_date_day_of_month <dbl>, stays_in_weekend_nights <dbl>,
## #   stays_in_week_nights <dbl>, adults <dbl>, children <dbl>, babies <dbl>,
## #   meal <chr>, country <chr>, market_segment <chr>,
## #   distribution_channel <chr>, is_repeated_guest <dbl>,
## #   previous_cancellations <dbl>, previous_bookings_not_canceled <dbl>,
## #   reserved_room_type <chr>, assigned_room_type <chr>, …
```

15. Pick unique rows using distinct() (Slide #52)

```
# Enter code here
# distinct(): Creates data with one column, listing the distinct values
hotels %>% distinct(hotel)
```

```
## # A tibble: 2 × 1
##   hotel
##   <chr>
## 1 Resort Hotel
## 2 City Hotel
```

C. Creating new columns

16. Creating a single column with mutate() (Slide #56)

```
# Enter code here
hotels %>% mutate(teeny_tinies = children + babies) %>% select(hotel, teeny_tinies, c
hildren, babies) %>% arrange(desc(teeny_tinies))
```

```
## # A tibble: 119,390 × 4
##    hotel        teeny_tinies children babies
##    <chr>               <dbl>    <dbl>  <dbl>
##  1 Resort Hotel           10       10      0
##  2 City Hotel             10        0     10
##  3 City Hotel              9        0      9
##  4 Resort Hotel            3        2      1
##  5 Resort Hotel            3        2      1
##  6 Resort Hotel            3        2      1
##  7 Resort Hotel            3        3      0
##  8 Resort Hotel            3        2      1
##  9 Resort Hotel            3        2      1
## 10 Resort Hotel            3        3      0
## # ℹ 119,380 more rows
```

17. Creating multiple columns with mutate() (Slide #58)

```
# Enter code here
hotels %>% mutate(teeny_tinies = children + babies, avg_teeny_tinies = mean(teeny_tin
ies)) %>% select(hotel, teeny_tinies, avg_teeny_tinies, children, babies) %>% arrange
(desc(teeny_tinies))
```

```
## # A tibble: 119,390 × 5
##    hotel        teeny_tinies avg_teeny_tinies children babies
##    <chr>               <dbl>            <dbl>    <dbl>  <dbl>
